

Sunil Kurapati

Full Stack Engineer | Backend & Distributed Systems

Bengaluru, India | +91-9923838812 | skurapatim3100@gmail.com

GitHub | LinkedIn | LeetCode

Summary

Full Stack Engineer with 3.5+ years of experience building scalable SaaS and fintech platforms using Node.js, TypeScript, React.js, PostgreSQL, MongoDB, Redis, Kafka, and AWS. Experienced in distributed systems, event-driven architectures, and Kubernetes-based production environments. Strong ownership mindset with experience leading features, mentoring interns, and resolving production issues at scale.

Experience

Software Engineer II (Backend / Full Stack Engineer)

Neokred Technologies, Bengaluru

Feb 2026 – Apr 2026

- Led end-to-end frontend development of the **APOS (Point-of-Sale)** platform using Next.js, React, Zustand, Tailwind CSS, and TypeScript, building billing, inventory, customer management, onboarding, and product administration systems.
- Collaborated across cross-functional teams to define reusable frontend architecture patterns and accelerate feature delivery.
- Leveraged AI-assisted engineering workflows using Claude Code and structured agentic development practices to accelerate development, testing, and code reviews.
- Developed secure fintech integration workflows for the **CollectBot** platform by integrating external banking APIs, building wrapper services, and protecting sensitive financial data using symmetric and asymmetric encryption techniques.

Software Engineer (Full Stack Engineer)

Facctum Solutions, Bengaluru

Dec 2022 – Feb 2026

- Designed and led development of a centralized event-driven **Audit Logging Platform** using NATS JetStream and PostgreSQL, reliably processing **50K–100K events/day** across multiple SaaS products.
- Architected configurable audit pipelines with ACK/NACK retries, dead-letter queue handling, and controlled batch-based asynchronous processing, improving ingestion reliability and preventing PostgreSQL connection pool exhaustion under burst traffic.
- Contributed significantly to the development of a centralized multi-tenant **RBAC Admin Platform** supporting **10K+ users**, enabling tenant onboarding, feature management, and role-based access control during the organization's transition from SaaS to PaaS.
- Built tenant-aware authorization middleware enforcing feature entitlements, role-based permissions, and API-level access validation across distributed backend services.
- Optimized high-latency APIs operating on **100K+ row datasets** using indexing, pagination, and request throttling, reducing database load and improving response latency.
- Resolved Kubernetes OOM failures in a dynamic Excel export service by redesigning workflows from full in-memory processing to chunked streaming-based processing, enabling stable exports of **200K+ records** compared to the previous implementation failing beyond **5K records**.
- Collaborated with cross-functional teams to deliver scalable SaaS platform capabilities, while mentoring interns and junior engineers in backend development and distributed systems fundamentals.

Technical Skills

Languages: TypeScript, JavaScript, SQL

Backend: Node.js, Express.js, REST APIs, GraphQL, gRPC, Microservices, Kafka, NATS JetStream

Frontend: React.js, Next.js, Redux, Zustand, Tailwind CSS, Material UI (MUI)

Databases: PostgreSQL, MongoDB, Redis

Cloud, DevOps & Tools: AWS, Docker, Kubernetes, Jenkins, CI/CD, CloudWatch, Git, Postman

Security & Architecture: OAuth2, JWT, RBAC, Multi-Tenant Architecture, Encryption, Distributed Systems, Scalability

Education

B.E. in Information Technology

CGPA: 9.20/10

Savitribai Phule Pune University

2022

Achievements

- Solved **300+ Data Structures and Algorithms problems** across LeetCode.
- Contributed to distributed backend systems processing **50K–100K events/day** across audit logging workflows.
